LITTLEBIGSOUND®

NatureTones

LITTLEBIGSOUND is a fresh and exciting brand of audio devices that takes your enjoyment of music to a new level of acoustic quality, style and comfort. Our NatureTones headphones with wooden chambers not only have excellent sound properties that are fine tuned to match each particular type of wood. They also captivate music lovers due to their stunning wood grains and natural colours that are unique and one-of-a-kind. This distinguishes NatureTones from other lifestyle products and makes each of our headphones an elegant masterpiece.

We are a small team of passionate music enthusiasts who constantly strive to create class-leading technology. We build high quality audio devices that understand both the science of sound and art of human experience. LITTLEBIGSOUND's audio devices are immaculately designed and tuned by professional audio engineers, delivering high resolution sound quality and realistic sound stage that immerse you in remarkable music experiences that are breathtakingly real, vivid and warm.

Last but not least, NatureTones headphones are crafted from solid hardwood that has been reclaimed from used furniture according to the principle of upcycling. This way we are giving an old product a new lease of life. Likewise, the largest part of our packaging consists of recycled material. Thus, each individual who opts to wear a NatureTones headphone will at the same time make a contribution towards a more responsible, environmentally sound use of our planet's resources and a more sustainable world.

Wood types

The sound properties of NatureTones headphones are meticulously tuned by professional sound engineers to work in harmony with each particular type of wood, bringing out the best sound quality possible to delight your ears. Special care has also been taken in shaping the wooden chambers to enhance the distinctive organic warmth that is the defining sound signature of NatureTones headphones.

Cherry

Cherry wood has a light brown colour that deepens handsomely with age and exposure to sunlight. Unique grain patterns, figures and knots add to its character. Cherry wood highlights distinctive timbre details with full flavoured tones and is great for music lovers who enjoy savouring soulful music with rich textures. We recommend cherry wood for genres such as Reggae, Jazz, Soul and classical music.

Rose

Rose wood is a reddish coloured hardwood that is exceptionally lustrous and beautiful. It has been used to produce some of the most gorgeous musical instruments that are prized for generations. Rose wood highlights powerful bass with smooth midrange and treble, and is especially suitable for audiophiles who would move spontaneously to the rhythm of their favourite music. We recommend rose wood for genres such as Rock, Pop and R&B.

Walnut

Walnut wood is a dark coloured hardwood with distinctive grain patterns. It highlights dynamic contrast with strong overtones and is highly sought after by indulgent audiophiles who love immersing themselves in a celestial sphere of music. We recommend walnut wood for genres such as Indie, Hip-Hop, House and Techno.
